![Plague Outbreaks Chart](chart.png)

As is evident in the map, plague outbreaks in 1347 were oriented towards the Mediterranean region. In 1348, the plague spread into inland Europe from the Mediterranean. In 1664, plague outbreaks continued throughout Europe. Looking at the pattern of outbreaks by half-century, we can see that the outbreaks were most frequent between 1350 and 1400. Looking at the pattern of outbreaks by decade, we can conclude that outbreaks were more frequent in the 1500s. Looking at the pattern of outbreaks by year, we can see that the outbreaks were most frequent in 1664. As is evident in the map, plague outbreaks in 1347 were oriented towards the Mediterranean region. In 1348, the plague spread into inland Europe from the Mediterranean. In 1664, plague outbreaks continued throughout Europe.
The outbreaks that occurred between 1347 and 1900 had a significant impact on the population and economy of Europe. Looking at the pattern of outbreaks by half-century, we can conclude that the most severe outbreaks occurred in the 1600s. Looking at the pattern of outbreaks by decade, we can conclude that the majority of outbreaks occurred in the 1400s and 1600s. As is evident in the map, plague outbreaks in 1347 were oriented towards the Mediterranean. In 1348, the plague spread into inland Europe from the Mediterranean. In 1664, plague outbreaks were widespread across Europe.
